AB A convenient synthesis of [N-methyl-11C]-3-[(6-dimethylamino)pyridin-3-yl]-2,5-dimethyl-N,N-dipropylpyrazolo[1,5-a]pyrimidine-7-amine (R121920, I), a highly selective CRF1 antagonist has been developed as a potential PET ligand. The precursor for radiolabeling, II, was synthesized through a novel palladium catalyzed Suzuki coupling of aryl bromide III with heteroaryl boronate ester IV. The requisite boronate ester IV was synthesized in four steps from 2-amino-5-bromopyridine in 50% overall yield. Although the synthesis of cold R121920 proceeded in 93% yield by sodium hexamethyl-disilazide (NaHMDS) mediated N-methylation of the desmethylamine I at -78°C, the attempted radiosynthesis under various conditions using conventional bases were not successful. However, the radiolabeling of II was successfully carried out with [11C]MeOTf in acetone at -20°C in the absence of added basic reagents. The radiotracer was purified by RP-HPLC followed by RP-solid phase extraction. The yield of [11C]R121920 was 5% (at EOB) and the specific activity was > 1000 Ci/mmol (at EOB) with a radiochem. purity > 99%.

TITLE: Altered serotonergic neurotransmission but normal hypothalamic-pituitary-adrenocortical axis activity in mice chronically treated with the corticotropin-releasing hormone receptor type 1 antagonist NBI 30775

AB Antagonists of the corticotropin-releasing hormone receptor type 1 (CRH-R1) are regarded as promising tools for the treatment of stress-related psychiatric disorders. Owing to the intricate relationship between CRH and serotonin (5-HT), we studied the effects of chronic oral treatment of C57Bl6/N mice with the CRH-R1 antagonist NBI 30775 (formerly known as R121919) on hippocampal serotonergic neurotransmission during basal (on 15th day of treatment) and stress (forced swimming; on 16th day of treatment) conditions by in vivo microdialysis. Given the important role of CRH in the regulation of hypothalamic-pituitary-adrenocortical (HPA) axis activity and behavior, the effects of NBI 30775 on dialyzate-free corticosterone levels, and on home cage and forced swimming-related behavior were also assessed. Chronic administration of NBI 30775 (18.4±0.9 mg/kg/day) did not result in alterations in food consumption and body weight. NBI 30775 caused complex changes in hippocampal serotonergic neurotransmission. Whereas no effects on the diurnal rhythms of 5-HT and its metabolite 5-hydroxyindoleacetic acid were found, the responses of the neurotransmitter and its metabolite to 10 min of forced swim stress were reduced and prolonged, resp. NBI 30775 did not change free corticosterone levels over the diurnal rhythm. Moreover, NBI 30775-treated mice showed a similar forced swim stress-induced increase in corticosterone as observed in the control group. No effects of NBI 30775 on home cage, and swim stress-related active behaviors (climbing, swimming) and immobility were found. Thus, whereas chronic antagonism of CRH-R1 did not compromise HPA axis performance and behavior, distinct changes in serotonergic neurotransmission developed. Owing to the important role of 5-HT in the pathophysiol. of mood and anxiety disorders, the latter

observation may contribute to the therapeutical efficacy of CRH-R1 antagonists in these illnesses.

 AB An efficient palladium-catalyzed synthesis of 3-arylpirazolo[1,5-a]pyrimidines has been investigated. The key step in the synthesis is a Suzuki biaryl coupling of 3-bromo-2,5-dimethyl-7-aminopyrazolo[1,5-a]pyrimidines with arylboronic acids to provide 3-arylpirazolo[1,5-a]pyrimidines in moderate to good yield. AB Evidence from basic and clin. research suggests that hyperactivity of central corticotropin-releasing hormone (CRH) circuits contributes to causality and course of affective disorders. Therefore, CRH receptor antagonists have attracted attention as potential therapeutics. We could previously show that the novel high-affinity non-peptide CRH1 receptor antagonist R121919 significantly inhibits stress-induced corticotropin release and displays anxiolytic effects in rats selectively bred for high anxiety-related behavior. These animals are characterized by their innate hyperreactivity of the hypothalamic-pituitary-adrenocortical system linked to an increased emotionality and therefore are suitable for the evaluation of CRH1 receptor antagonists. Here we show that in addition to its effects on anxiety-related behavior and corticotropin secretion, R121919 attenuates the stress-induced release of corticosterone, prolactin, and oxytocin. Moreover, the decrease in plasma testosterone following exposure to stress is abolished by R121919. Our data indicate that antagonism of CRH1 receptors may prevent stress-associated endocrine alterations.

AB The in vitro pharmacol. profile of a novel small mol. corticotropin-releasing factor 1 (CRF1) receptor antagonist, (±)-N-[2-methyl-4-methoxyphenyl]-1-(1-(methoxymethyl)propyl)-6-methyl-1H-1,2,3-triazolo[4,5-c]pyridin-4-amine (SN003), and the characteristics of its radioligand ([3H]SN003) are described. SN003 has high affinity and selectivity for CRF1 receptors expressed in rat cortex, pituitary, and recombinant HEK293EBNA (HEK293e) cells with resp. radiolabeled ovine CRF ([125I]oCRF) binding Ki values of 2.5, 7.9, and 6.8 nM. SN003 was shown to be a CRF1 receptor antagonist inasmuch as it inhibited CRF-induced cAMP accumulation in human CRF1HEK293e cells and CRF-stimulated ACTH hormone release from rat pituitary cells without agonist activities. Significant decreases in the Bmax of [125I]oCRF binding by SN003 suggest that this antagonist is not simply competitive. To further explore the interaction of SN003 with the CRF1 receptors, [3H]SN003 binding to rat cortex and human CRF1HEK293e cell membranes was characterized and shown to be reversible and saturable, with KD values of 4.8 and 4.6 nM, and Bmax values of 0.142 and 7.42 pmol/mg protein, resp. The association and dissociation rate consts. of

[3H]SN003

(k+1 0.292 nM-1 min-1 and k-1 0.992+10-2 min-1) were also assessed

using human CRF1HEK293e cell membranes, giving an equilibrium dissociation constant

of 3.4 nM. Moreover, [3H]SN003 binding displayed a single affinity state and insensitivity to 5'-guanylylimidodiphosphate, consistent with characteristics of antagonist binding. Incomplete inhibition of [3H]SN003 binding by CRF peptides also suggests that SN003 is not simply competitive with CRF at CRF1 receptors. The distribution of [3H]SN003 binding sites was consistent with the expression pattern of CRF1 receptors in rat brain regions. Small mol. CRF1 antagonist radioligands like [3H]SN003 should enable a better understanding of small mol. interactions with the CRF1 receptor.

AB A review. Basic and clin. studies demonstrate that the central corticotropin-releasing hormone (CRH) circuits are overactive among depressives, a phenomenon frequently reflected by enhanced cortisol and corticotropin levels in the peripheral blood of these patients. Behavioral pharmacol. provided evidence that CRH over-expression accounts for many signs and symptoms characteristic of depression. CRH-type 1 receptors (CRHR1) were identified as responsible for conveying the CRH signal into cellular circuitries, thereby inducing depression-related symptoms. In order to decrease CRH signaling, many pharmaceutical companies have developed small mols. that after oral ingestion, penetrate the blood-brain barrier and selectively bind at CRHR1 with high affinity.

These compds. have been tested in animal models and patients with major depression. One of these compds., R-121919 (Neurocrine Biosciences Inc), ameliorated depressive symptomatology without unwanted endocrine side effects or other adverse effects. While clin. trials of R-121919 have been discontinued after phase IIa studies, a number of other CRHR1 antagonists are being developed, and hopefully this advance will ultimately lead to a favorable alternative to currently available antidepressant drugs.

AB Corticotropin-releasing factor (CRF) is the major physiologic regulator of the hypothalamic-pituitary-adrenal (HPA) axis and serves to coordinate the mammalian endocrine, autonomic, and behavioral responses to stress. Considerable literature from clinical and preclinical data suggests that hypersecretion of hypothalamic and/or extrahypothalamic CRF systems is a major factor in the pathogenesis of affective and anxiety disorders. Based on this premise, a CRF1 receptor antagonist has been hypothesized to possess anxiolytic and/or antidepressant properties. In this study, an acute dose of the lipophilic CRF1 receptor antagonist 3-[6-(dimethylamino)-4-methyl-pyrid-3-yl]-2,5-dimethyl-N,N-dipropyl-pyrazolo[2,3-a]pyrimidin-7-amine (R121919), administered i.v. to rats with surgically implanted jugular cannula 60 min before a 5-min restraint stress, dose dependently

attenuated peak plasma adrenocorticotropin hormone (ACTH) and corticosterone concns. by 91 and 75%, resp. In a second study, acute administration of R121919 reduced measures of anxiety in a rodent defensive withdrawal paradigm. R121919 dose dependently decreased latency to exit the tube, and total time spent in the tube 60 min after a single s.c. administration. In addition, the ACTH and corticosterone response to novelty was decreased by 82 and 97%, resp., at the 10-mg/kg dose of R121919. In another study, this dose was associated with approx. an 85% occupancy of the CRF1 receptor in the cortex measured 75-min postsubcutaneous injection. These data confirm that R121919 acts as a CRF1 receptor antagonist in vivo, attenuates HPA axis responsivity, and possesses anxiolytic properties.

AB A process for the preparation of corticotropin releasing factor receptor I was disclosed. 2-Methyl-4-methoxybenzyl bromide (prepn given) was converted to the nitrile (DMF/EtOHaq, NaCN) and acetylated (EtOAc, Na⁺, reflux) and reacted with hydrazine to give an intermediate pyrazole. This was reacted with Et acetoacetate (HOAc, reflux) to form 7-hydroxy-2,5-dimethyl-3-(2-methyl-4-methoxyphenyl)pyrazolo[1,5-a]pyrimidine (II). II was treated with POCl₃ (PhMe, DIEA) and the chloride displaced with (R)-2-butylamine to afford I. I is used in treating anxiety, depression, and other psychiatric, neurol. disorders as well as treatment of immunol., cardiovascular or heart-related diseases and colonic hypersensitivity associated with psychopathol. disturbance and stress.

AB The competitive binding properties and functional effects of a novel nonpeptide corticotropin-releasing factor type I (CRF1) receptor antagonist, R121919, were evaluated. R121919 administered at 0.63-20 mg/kg orally to Wistar rats 60 min before testing dose-dependently attenuated the swim stress-induced anxiogenic-like behavior in the elevated plus-maze model of anxiety. Moreover, receptor autoradiog. revealed that R121919 dose-dependently occupied brain CRF1 receptors in animals tested in the plus-maze experiment. Orally administered doses of ≤20 mg R121919/kg also blunted basal and swim stress-induced pituitary-adrenocortical activation, produced addnl. anxiolytic-like behavioral actions in the defensive withdrawal and defensive burying paradigms, and antagonized the locomotor-stimulatory properties of exogenously administered CRF. These results suggest that the anxiolytic-like efficacy of R121919 in attenuating the stress-, novelty-, shock-, and CRF-induced increases in behavioral arousal is correlated with competitive blockade of central CRF1 receptors.

AB The neuroprotective effects of a systemically active, highly selective, corticotropin-releasing factor-1 (CRF1) receptor antagonist, R121920 ((7-dipropylamino)-2,5-dimethyl-3-[2-(dimethylamino)-5-pyridyl] pyrazolo [1,5-a] pyrimidine), was assessed in 2 rat models of permanent focal cerebral ischemia, where the middle cerebral artery (MCA) was occluded either through the subtemporal approach or using the intraluminal suture technique. R121920 rapidly crossed the blood-brain barrier after i.v. (IV) bolus administration (10 mg/kg), with peak brain concns. at 5 min ($2.26 \pm 0.40 \mu\text{g/mL}$), which were approx. 2-fold greater than those in plasma ($0.98 \pm 0.24 \mu\text{g/mL}$). Treatment with R121920 (10 mg/kg IV followed by 5 mg/kg s.c. at hourly intervals for 4 h) significantly ($P < 0.001$) reduced total (by 40%) and cortical (by 37%) infarct volume at 24 h after subtemporal MCA occlusion (MCAO). In the intraluminal suture MCAO model, IV administration of R121920 (10 mg/kg) at the time of ischemia onset (and at multiple times thereafter) reduced both hemispheric infarct volume (by 34%, $P < 0.001$) and brain swelling (by 50%, $P < 0.001$) when assessed at 24 h. In this model of focal ischemia, significant reduction ($P < 0.05$) in both outcome measures was obtained when R121920 administration was delayed up to 1 h after MCAO. These results further define the anti-ischemic properties of selective CRF1 antagonists in 2 exptl. models of permanent focal cerebral ischemia.

corticotropin-releasing factor receptor. The above diseases include depression, mania, child abuse due to depression, depression after child birth, anxiety, general anxiety, panic disorders, phobia, obsessive-compulsive disorders, post-traumatic-stress disorder, autism, emotional disorders, emotional disturbance, bipolar disorder, , schizophrenia, peptic ulcer, irritable bowel syndrome, ulcerative colitis, Crohn's disease, diarrhea, constipation, intestinal functional abnormality accompanied by stress, neurol. vomiting, Alzheimer's disease, neurodegenerative disease, multiple infarction dementia, and senile dementia, neurol. appetite depression, eating disorders, obesity, diabetes, alc. dependence, drug preference, alc. or drug withdrawal symptom. They also include insomnia, migraine headache, stress headache, muscular stress headache, ischemic nerve disorders, excitatory toxin nerve disorders, stroke, progressive supranuclear paralysis, amyotrophic lateral sclerosis, multiple sclerosis, muscle spasm, chronic fatigue syndrome, neurol. social growth-retardation, epilepsy, head injury, spinal injury, writer's cramp, torticollis spastica, cervicobrachial syndrome, Meniere's syndrome, vegetative dystonia, hair loss, neuropathy, hypertension, cardiovascular disorders, tachycardia, congestive heart attack, hyperpnea syndrome, bronchial asthma, apnea syndrome, sudden infant death syndrome, inflammatory disorders, pain, allergy, impotence, menopausal syndrome, fertilization disorder, sterility, cancer, immune function disorders during HIV infection or caused by stress, hemorrhagic stress, Cushing's disease, thyroid gland function abnormality, meningitis, acromegaly, incontinence, and osteoporosis, etc. Thus, a solution of 7-chloro-6-(2-chloroethyl)-3-mesityl-2,5-dimethylpyrazolo[1,5-a]pyrimidine and 3-aminopentane in Me Et ketone was refluxed for 1 h to give, after treatment with HCl in Et₂O, 8-(1-ethylpropyl)-3-mesityl-2,5-dimethyl-7,8-dihydro-6H-pyrazolo[1,5-a]pyrrolo[3,2-e]pyrimidine hydrochloride (II). II showed IC₅₀ of 100 nM for inhibiting the binding of [125I]sauvagine to human CRF receptor expressed in HEK 293 cells and showed IC₅₀ of 900 nM against adenylic acid cyclase.

E.g., a multi-step synthesis of the pyrazolo[1,5-a]pyrimidine II was described. The NPY1 receptor binding affinity for the compds. I, expressed as a K_i, ranges from 0.1 nM to 10 μM. The compds. I are also useful as probes for the localization of NPY1 receptors and as stds. in assays for NPY1 receptor binding. Compds. I were also tested for CRF1 receptor binding affinity.

AB A corticotropin releasing factor (CRF) antagonist is administered to treat disorders that can be treated by altering circadian rhythm, as well as depression (in which a second compound for treating depression is administered, the second compound having an onset of action that is delayed with respect to that of the CRF antagonist). Methods for treating cardiovascular diseases, migraine, non-migraine headaches, and emesis are also disclosed.

AB The title compds. [I or II; A = N, CR; Z = N, CR2; Ar = (un)substituted Ph, naphthyl, pyridyl, etc.; R = H, alk(en/yn)yl, halo, etc.; R1, R2 = H, alk(en/yn)yl, halo, etc.; R3 = H, SH, aryl, etc.; R14 = (un)substituted alk(en/yn)yl, cycloalkyl(alkyl)], useful in treating CRF-related disorders, particularly anxiety, depression, and other psychiatric, neurol. disorders as well as treatment of immunol., cardiovascular or heart-related diseases and colonic hypersensitivity associated with psychopathol. disturbance and stress, were prepared and formulated. For instance, 5-amino-4-(2-chloro-4-methylphenyl)-3-methylpyrazole was cyclized with Et acetoacetate in AcOH to give 42% 7-hydroxy-2,5-dimethyl-3-(2-chloro-4-methylphenyl)pyrazolo[1,5-a]pyrimidine. The latter was treated with POCl3 and PhNEt2 to give the 7-chloro analog (84%), which reacted with 3-pentylamine to give 60% title compound I [A = CH; R1 = Me; R3 = NHCHEt2; Z = CMe; Ar = 2-Cl-4-MeC6H3]. The compds. I are effective at 0.002-200 mg/kg/day.

AB Corticotropin releasing factor (CRF) antagonists (no data) of formulas I and II are disclosed [wherein A = N or CR; Z = N or CR₂; Ar = (un)substituted Ph, naphthyl, pyridyl, pyrimidinyl, indanyl, tetralinyl, addnl. selected heterocycles; R = H, alk(en/yn)yl, cycloalkyl(alkyl), halo, cyano, haloalkyl; R₁, R₂ = H, groups listed for R, NH₂ or derivs., OH or derivs., SH or derivs., addnl. substituted alkyls; R₃ = H, OH or derivs., SH or derivs., acyl, CO₂H or esters, NH₂ or derivs., aryl, heteroaryl, alk(en/yn)yl, etc.; R₄ = (un)substituted alk(en/yn)yl or cycloalkyl(alkyl)]. The compds. are of use in the treatment of CRF-related disorders, particularly anxiety and depression, as well as other psychiatric, neurol., immunol., cardiovascular, and psychopathol. disorders. For instance, 5-amino-4-(2-chloro-4-methylphenyl)-3-methylpyrazole was cyclized with Et acetoacetate in AcOH to give 42% 7-hydroxy-5-methyl-3-(2-chloro-4-methylphenyl)pyrazolo[1,5-a]pyrimidine. The latter was treated with POCl₃ and PhNET₂ to give the 7-chloro analog (84%), which reacted with 3-pentylamine to give 60% title compound III.

AB Structure-activity relationship studies led to the discovery of 4-(3-pentylamino)-2,7-dimethyl-8-(2-methyl-4-methoxyphenyl)-pyrazolo-[1,5-a]-pyrimidine (compound 11-31, DMP904), whose pharmacol. profile strongly supports the hypothesis that hCRF1 antagonists may be potent anxiolytic drugs. Compound 11-31 (hCRF1 Ki = 1.0 ± 0.2 nM (n = 8)) was a potent antagonist of hCRF1-coupled adenylate cyclase activity in HEK293 cells (IC50 = 10.0 ± 0.01 nM vs. 10 nM r/hCRF, n = 8); α-helical CRF(9-41) had weaker potency (IC50 = 286 ± 63 nM, n = 3). Analog 11-31

Cate

had good oral activity in the rat situational anxiety test; the min. ED for 11-31 was 0.3 mg/kg, orally. Maximal efficacy (approx. 57% reduction in latency time in the dark compartment) was observed at this dose. Chlordiazepoxide caused a 72% reduction in latency at 20 mg/kg, orally. CP154526-1 (30 mg/kg, orally) was inactive in this test. Compound 11-31 did not inhibit open-field locomotor activity at 10, 30, and 100 mg/kg, orally in rats. In beagle dogs, this compound (5 mg/kg, i.v., orally) afforded good plasma levels. The key i.v. pharmacokinetic parameters were $t_{1/2}$, CL and $V_{d,ss}$ values equal to 46.4 ± 7.6 h, 0.49 ± 0.08 L/kg/h and 23.0 ± 4.2 L/kg, resp. After oral dosing, the mean C_{max} , T_{max} , $t_{1/2}$ and bioavailability values were equal to 1260 ± 290 nM, 0.75 ± 0.25 h, 45.1 ± 10.2 h and 33.1%, resp. The overall rat behavioral profile of this compound suggests that it may be an anxiolytic drug with a low motor side effect liability.

AB A review with 56 refs. Neurocrine Biosciences and Janssen are jointly developing NBI-30775, a corticotropin-releasing factor (CRF) antagonist, acting at CRF1 receptors, for the potential treatment of anxiety and depression. It is in phase IIa trials. Janssen is conducting an open-label phase II trial in 20 major depressive disorder patients. Neurocrine Biosciences expects the results of the trial in the 2nd half of 1999. Large-scale phase II trials in depression and anxiety are planned for 2000 in the US and Europe. Phase I trials in the US and Belgium, for the treatment of anxiety and depression, were completed in autumn 1998. Neurocrine has an extensive CRF program and is investigating a number of other CFR antagonists for the potential treatment of Alzheimer's disease, eating disorders, obesity, stroke, head trauma, and epilepsy.

AB The authors have assessed the utility of the Cytosensor microphysiometer for studying the pharmacol. of recombinant CRF receptors. Chinese hamster ovary cells stably expressing the human CRF1 or CRF2 receptor were perfused in the Cytosensor with bicarbonate-free Hams F12 (pH 7.4) containing 2% bovine serum albumin. The rank order of potencies of agonist peptides were CRF = sauvagine = urocortin = urotensin at CRF1 (pEC50 values 11.16,

11.37, 11.43 and 11.46), and urocortin = sauvagine > urotensin > CRF at CRF2 (pEC50 values 10.88, 10.44, 9.36 and 8.53; -9). α -Helical CRF (9-41) was a competitive antagonist at the CRF2 receptor (pKB = 6.99), but was a partial agonist at the CRF1 receptor (pEC50 = 6.85, Emax = 33%). CP 154,526 was a competitive antagonist at the CRF1 receptor (pKB = 8.17), but was inactive at the CRF2 receptor. These data are consistent with established CRF receptor pharmacol. and show that the Cytosensor is a viable method for assessing the functional activity of CRF-receptor agonists and antagonists.

AB Rat and human CRF2 α receptors were expressed in CHOPro 5 cells and stable cell lines generated. Each receptor was characterized using [¹²⁵I][tyr⁰]sauvagine and results compared to CRF1 receptors expressed in the same parental cell line. Under identical assay conditions, [¹²⁵I][tyr⁰]sauvagine labeled both CRF1 and CRF2 α receptors with high affinity. The level of expression varied from 103 fmol/mg membrane protein to 1842 fmol/mg membrane protein (rat CRF1 receptors and rat CRF2 receptors, resp.). It was possible to establish robust scintillation proximity assays (SPA) using wheat germ agglutinin (WGA) SPA beads to trap membrane protein. The success of the SPA assay format was dependent on the level of receptor expression observed. The rank order of affinities of a series of peptide CRF receptor agonists and antagonists was similar to that described in the literature for the two receptor subtypes as determined using radioligand binding and cAMP accumulation. No pharmacol. differences were apparent between rat and human cloned receptors with the exception of α -helical CRF-(9-41). This peptide exhibited 10-fold higher affinity for rat CRF2 α receptors as compared to human CRF2 α receptors. PD 173307, PD 173602 and PD 174239 exhibited high affinity and selectivity for human CRF1 receptors, and as such represent useful tools for probing CRF receptor function.

AB We have already reported 7-oxo-4,7-dihydropyrazolo[1,5-a]pyrimidine-3-carboxylic acid derivs., which are potent in vitro angiotensin II (AII) antagonists, but have no oral antihypertensive activity. Removal of the carboxylic acid and replacement of the heteroarom. system afforded potent in vitro antagonists. Removal of the carbonyl oxygen and changing the position of the biphenyltetrazole substituent were critical to the display of oral activity. To improve the in vitro and oral activities, modifications were made of the substituents at the 3- and 5- positions of the pyrazolo[1,5-a]pyrimidine. Structure-activity studies showed the Me substituent at the 3-position to be essential for potent in vivo activity.

We present the design, syntheses, and biol. data of a series of pyrazolo[1,5-a]pyrimidine derivs., which are orally active AII receptor antagonists.

AB A series of purin-8-ones was prepared and discovered to have excellent binding affinity to the CRH-R1 receptor. Structure-activity studies focused on amine side-chain optimization, urea substitution and pyridyl isostere incorporation. Thus, the highly potent purin-8-ones show promise as a new class of potential anxiolytics and/or antidepressants.

AB A series of pyrazolo[1,5-a]pyrimidines was prepared and found to have affinity for the human CRF-1 receptor. The 3-dimensional structure of one of the most potent analogs in this series was determined by X-ray crystallog. and suggests the spatial requirements for potent CRF-1 receptor binding affinity in this series.

AB Title compds. I [R = (un)substituted Ph, pyridyl; R1 = substituted NH2, (un)substituted alkoxy; R2 = alkyl, alkoxy, alkylthio; R3 = H, alkyl, alkylsulfonyl, alkylsulfoxy, alkylthio] having CRF receptor antagonistic properties, were prepared. Thus, I [R = 2,4-Cl₂C₆H₃, R1 = N-propyl-N-cyclopropylmethylamino, R2 = Me, R3 = H, II] was obtained by treating 3-amino-4-(2,4-dichlorophenyl)pyrazole with MeCOCH₂CO₂Et, chlorinating I [R = 2,4-Cl₂C₆H₃, R1 = OH, R2 = Me, R3 = H] and aminating I [R1 = Cl]. II had a K_i for CRF receptor inhibition of <250 nM.

AB Hydrazine derivs. of several pyrazolo[1,5-a]pyrimidines, pyrazolo[1,5-a]-1,3,5-triazines, s-triazolo[1,5-a]pyrimidines, and imidazo[1,2-a]pyrimidines were synthesized and condensed with 5-nitrofurfural [698-63-5] in order to obtain the corresponding nitrofurfural hydrazones of each heterocycle. The compds. were screened for in vitro and in vivo activity against *Trypanosoma cruzi* in mice. 5-Methyl-7-(5-nitrofurfurylidenehydrazino)pyrazolo[1,5-a]pyrimidine (I) [58347-34-5] greatly increased the mean survival time of mice with terminal infections. Subtle alterations in the structure of I, such as removal of the 5-Me group or substitution of the 3 position with sulfonic acid or sodium sulfonate resulted in a drastic loss of in vivo and in vitro activity.
